

Simulated, true $\beta = 1$, $\lambda = 0.54$

Share of the true slope that survives

- on the truth s^* : slope 0.89
 — $\lambda, \pi = 0.5, \alpha_0 = \alpha_1$
 - - $\lambda, \pi = 0.15, \text{ only false alarms}$
- on the label $\hat{s}$: slope 0.52
 — $\lambda, \pi = 0.15, \alpha_0 = \alpha_1$
