

Simulated scores of the two groups

Model score (e.g.  $P(\text{rise})$ , any monotone scale)

■ "down" months    ■ "up" months    --- a threshold  $c$   
■ area = AUC = 0.68

ROC curve over all thresholds

False-positive rate ("down" above  $c$ )

— ROC curve    ..... no information: AUC = 0.5
