

Weights, log-log scale

Partial sums stop above 0

One simulated random walk

— $d = 0.25$: $K = 444$
— $d = 0.3$: $K = 387$
— $d = 0.5$: $K = 199$

---- threshold $\tau = 10^{-4}$
— FFD series, $d = 0.25$

— 0.178 x level (unit root)
— stationary remainder
