

Probability of a negative shock

Share of the variance from $z < 0$

Persistence with m_- or with $1/2$

— Skewed-t density $f(z)$, $\hat{\eta} = 7.70$, $\hat{\lambda} = -0.150$
 ■ $P(z < 0) = 0.473$

— $z^2 f(z)$ (integrates to 1)
 ■ $m_- = 0.5490$

— $\alpha + \gamma m_- + \beta = 0.9956$, half-life 157 days
 - - - $\alpha + \gamma/2 + \beta = 0.9852$, half-life 47 days
