

Discovery sample: how many tests survive?

Holdout check

....  $|t| = 1.96$ : 21 of 102 pass

--- BH, FDR 10%: 13 pass

-.-  $|t| > 3$ : 4 pass

— joint null, 95% of  $\max |t| = 3.32$ : 1 passes

--- Holm first step, FWER 5%:  $|t| > 3.49$ , none

●  $|t| < 1.96$  in discovery

● discovery  $|t| > 1.96$ , fails in holdout

◆ replicates: same sign,  $|t| > 1.96$
