

Fitted kernels of the VIX model

— K_1 (trend R_1), estimated on course data:
 $\alpha_1 = 1.13, \delta_1 = 0.022$

- - K_1 , Guyon & Lekeufack (2023), Table 3:
 $\alpha_1 = 1.06, \delta_1 = 0.020$

— K_2 (volatility Σ), estimated on course data:
 $\alpha_2 = 1.58, \delta_2 = 0.050$

- - K_2 , Guyon & Lekeufack (2023), Table 3:
 $\alpha_2 = 1.60, \delta_2 = 0.052$
