s.e. of $\hat{\kappa}$
daily: 0.121
monthly: 0.123
10^{-2}
10^{-1}
10^{0}
Sampling step Δ (years, log scale)
$\sqrt{(e^{2\kappa\Delta}-1)/(T\Delta)}$, T = 50 years
Infill limit $\sqrt{2\kappa/T}$ = 0.121
Monthly and daily sampling
If the s.e. fell like $1/\sqrt{n}$ from the monthly value
