

T = 78 price changes: P(positive) 9.2% (Normal), 6.7% (simulated)

T = 250 price changes: P(positive) 0.9% (Normal), 0.5% (simulated)

Simulated under Roll (binary signs, demeaned)

Normal approximation $N(\gamma_1, (\gamma_0^2 + 3\gamma_1^2)/T)$

Positive tail: $\hat{\gamma}_1 > 0$
